

Graph Wizard

How to use this script?

- Create a 101 frames animation (0-100) or use pre-animated movies from <website>. Frame#000 should be a blank frame then your 1-100 frames animation.
- Drag the animation into your new comp & hide it using the layer eye.
- Run the Graph Wizard script and select your comp & click on Create Graph Control Layer.
- Choose the 101 frames animation movie as reference layer in Graph Control Layer properties.
- Click on Add New Bar to add new copies of referenced movie with desired name and set its value using the Graph Control Layer Properties.
- Position your animated bars in the comp, do some dynamic camera movement if using 3D model animation in your comp.
- You can also set keyframes to Bar Values to start with 0% to your desired value.

Thankyou for using this script.
